Optimum preparation, extreme precision and highest quality ensure the success of Standex performances

Pro-Motion: Creativity and know-how for movement

During the past few years the inter-linkage has established itself in the field of automotive construction right up to global purchasing. A step which Standex has also consistently implemented, making the company „state-of-the-art“ technologically and logistically, in terms of development and realization of textured surfaces for automotive applications – at 30 locations world-wide plus additional international marketing points.

Step for Step: Coordination as the key to success

In addition to first class quality our comprehensive full service – from mutual design development right up to surface production using series tools for textured interior and exterior parts – is distinguished by our performance. This includes, among other things, analysis of the feasibility and corresponding documentation, provision of the technical data for the design department of the manufacturer or its suppliers as well as scheduling of all relevant processes.

Auto-Mobile: High-Tech for impressive results:

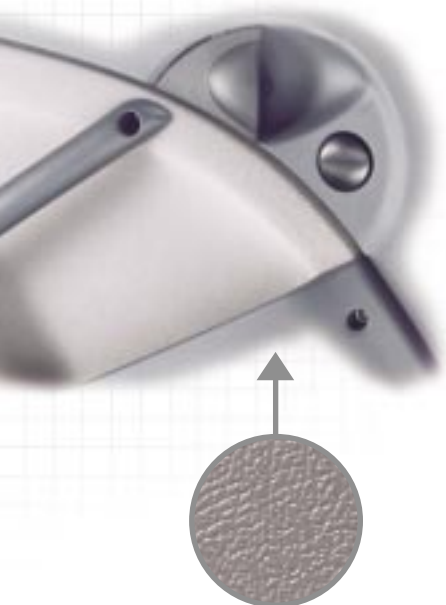

• Mold-Tech®

Our proven process for texturing molds for plastic and light alloy processing in two or three dimensional molding. Mold-Tech® solutions guarantee a high quality outfit with economical production costs.

The result: Fascinating optical and haptical impressions – evenly textured surface with its own, unmistakable succinctness: for a sense of well-being in stylish surroundings.

• Engraving Group

To date the Standex Engraving Group's world-wide development has created approximately 100,000 designs, for customers to fall back on – or – which can be enriched with attractive creations in cooperation with us.
